

## about the photographer

I have been taking pictures since I was 8 years old with my first 110 cartridge film camera. During high school I focused on sports and action with 35 mm photography. More recent pictures have included candid shots of my two young children as well as nature photography during our weekend romps using a digital single lens reflex camera (SLR).

I am particularly fascinated with capturing movement and high contrast, single color subjects such as found in Fish, Saddle, and Yellow Flower. I hope to develop a larger portfolio of these types of themes, particularly close-ups of smaller subjects.

In my other life I am a physician treating patients with heart disease.
